

DIY VOCAL BOOTH BLUEPRINTS

To make the acoustic blanket vocal booth, you'll need...

- 4 - Acoustic Blankets (I recommend [Vocal Booth To Go](#))
 - 14 - 1 inch T-joints
 - 8 - 1 inch U-joints
 - 24 - shower curtain rings
 - 1 - junior hacksaw
 - 4 - 2 inch Clamps (optional)
 - Several - 1 inch PVC pipes
 - *Most PVC pipe comes in 10 foot long segments, so you'll need roughly 7 of these (though the amount of pipes you need may change based on dimensions you want)*
-

[Click this link](#) to go to our SIZE CALCULATOR and put in the dimensions you need for your home studio.

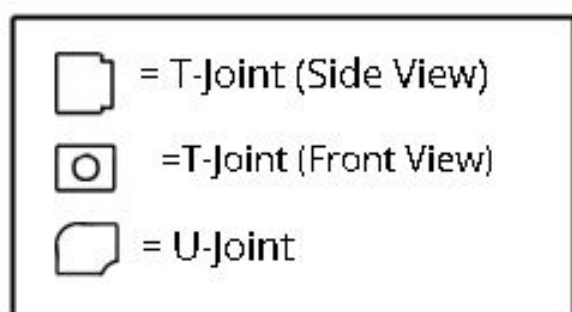

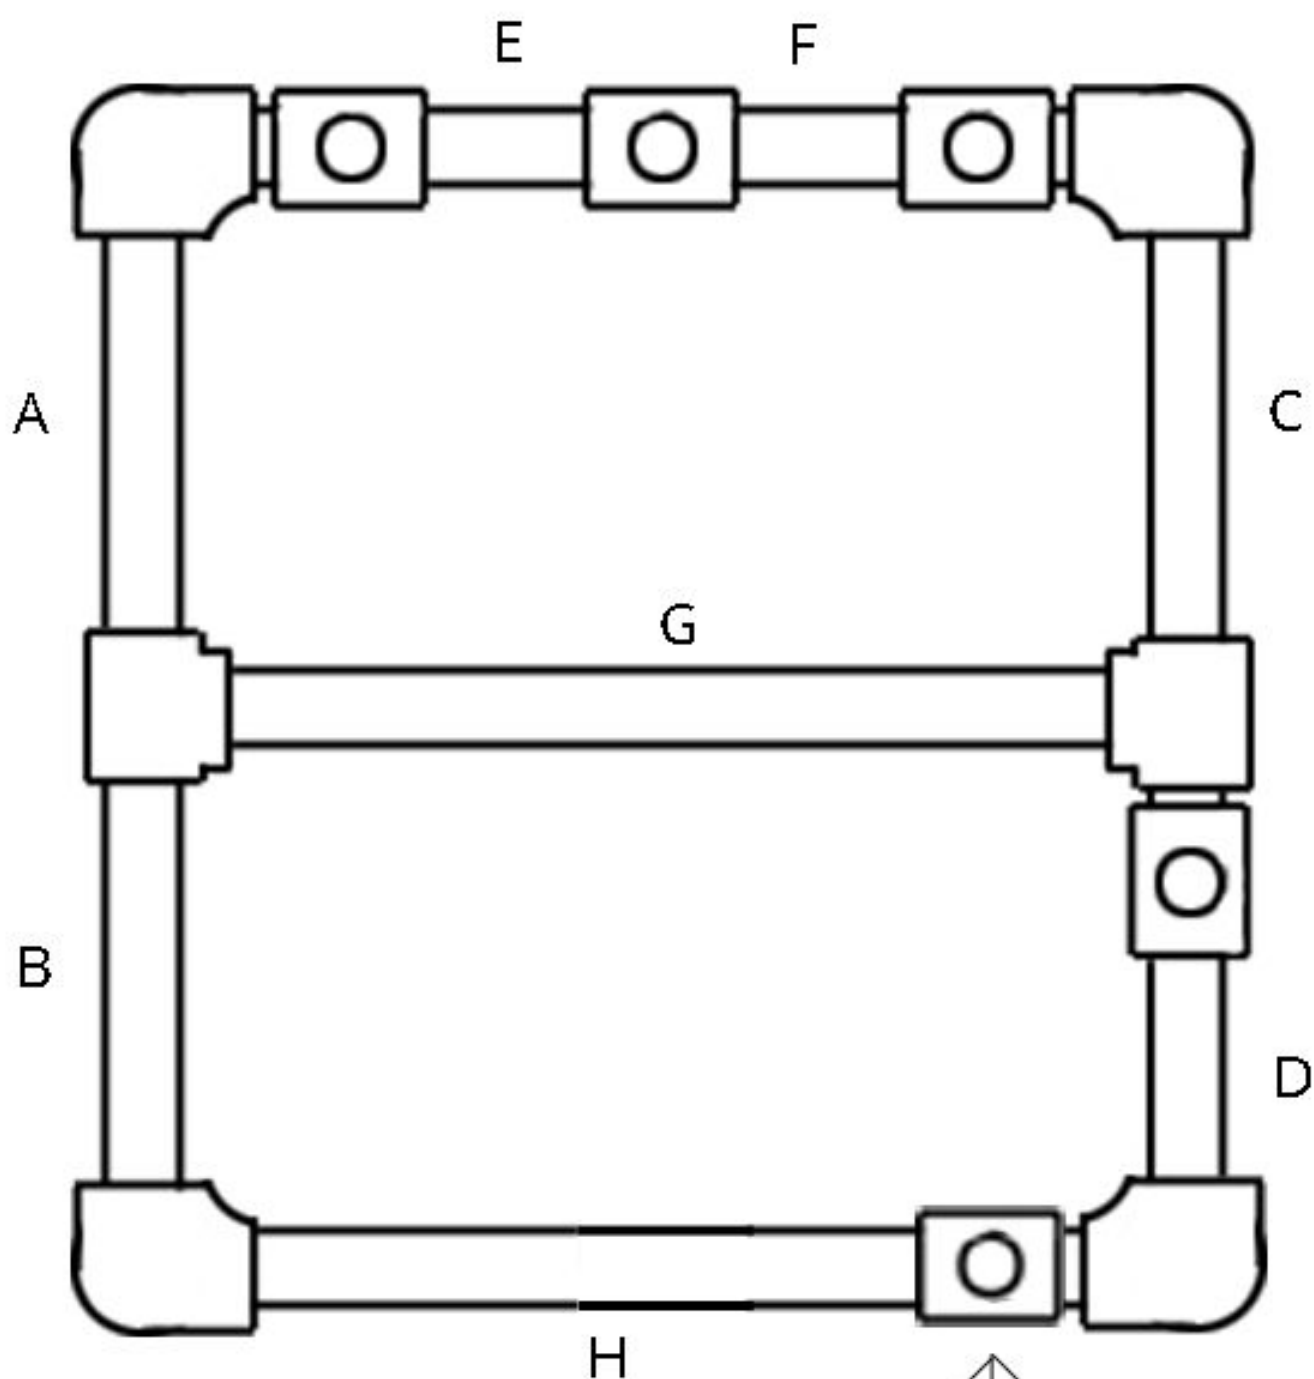

The following blueprints are of the SIDE of the vocal booth. Since there are two sides, you'll want to make two copies of each pipe.

The front is not shown, as the pipes connecting the two sides are all the same length. All 5 of those pipes are labeled as "I".

Finally, on top of the pipes that are labeled below, you will need EIGHT 2 in. long (or 5 cm.) pieces of pipe. These will connect your T-joints and U-joints together. These lengths will *not* change, even if you change the dimensions of your vocal booth design.

Good luck!

- Dylan
